EDUCATION

B. Tech
Computer Science and Engineering with specialization in Health Informatics
Vellore Institute of Technology Bhopal
September 2022 - July 2026
8.98 CGPA

Higher Secondary
Auxilium Girls' School
March 2021- April 2022
95.2 Percentage

High School
Auxilium Girls' School
March 2019- April 2020
96.2 Percentage

CO-CURRICULARS

- Smart India Hackathon 2024 Finalist
- Health Hackathon JHU & VITB Finalist
- Presented and Published research work on ML in cardiac disease prediction in ICDCC 2024
- Core Member, Eureka Club, VIT Bhopal
- Open-Source Contributor, GitHub

PROJECTS

EchoRetail: Retail Feedback Captured and Analyzed by AI
August 2025- Ongoing

- An AI-driven retail analytics system that generates synthetic transaction datasets using GANs and simulates realistic customer behavior.
- Implemented LLM-powered feedback analysis with ChromaDB and Gemini embeddings, enabling natural language queries on customer sentiment and trends.
- Built aspect-based sentiment analysis pipeline to extract opinions on price, quality, delivery, and service, revealing granular insights for business strategy.
- Applied topic modeling with BERTopic to cluster feedback into themes and visualized evolving trends in customer preferences and complaints.
- Conducted exploratory data analysis (EDA) on synthetic datasets, uncovering revenue patterns, category performance, and customer segmentation.

AI-Augmented Cardiac Risk Prediction using Synthetic Data Generation Techniques
November 2024-May 2025

- Built a synthetic data pipeline using CTGAN, VAE, and Table Diffusion to address dataset imbalance in heart disease prediction.
- Trained multiple models (SVM, XGBoost, CNN, Ensemble) achieving 85.85% accuracy with KNN on VAE data, 83.7% with Ridge Regression on Diffusion data, and consistent improvements across precision/recall (avg. 0.86 F1-score).
- Validated results with confusion matrices, showing reduced false negatives and improved diagnostic reliability using synthetic datasets.

SkinSight: Intelligent Skin Type Detection System
June 2023- April 2024

- Built a real-time CNN, ResNet-50 and Haar Cascade–based skin type detector on Raspberry Pi 5 and Logitech C920, achieving 80.38% accuracy (Dry: 56/73, Normal: 98/120, Oily: 100/123).
- Optimized with TensorFlow, Keras, OpenCV, and quantized models for low-latency edge deployment; integrated LED ring light and one-way mirror UI for clinical-grade usability.
- Applications in personalized dermatology, cosmetic recommendations, and telemedicine; demonstrated at ETESM-2025.

SKILLS

Java, C++, Python, SQL, Machine and Deep Learning, Generative AI algorithms, TensorFlow, PyTorch, Scikit-learn, Pandas, NumPy, Keras, Matplotlib, Tableau, LLMs, LangChain, LangGraph, ChromaDB/PineconeDB

CERTIFICATIONS

- IBM Blockchain Fundamentals and Developers
- FacePrep Mastering Data Structures and Algorithms
- Google Data Analytics
